PIYUSH GOYAL

Full-Stack Developer
Fatehabad, Haryana 125050 | 98967-87236 | goyalp3542@gmail.com | GitHub | LinkedIn

SUMMARY

Full-stack developer skilled in React.js, Node.js, Express.js, and MongoDB, with hands-on experience designing secure authentication systems, role-based platforms, and interactive 3D/animated UIs, plus deploying production-ready applications (AWS EC2, Lambda, Nginx, PM2, Docker, SSL). Comfortable owning a project end-to-end — from database schema and REST API design to frontend performance optimization and cloud deployment.

TECHNICAL SKILLS

- **Languages:** C++, HTML, CSS
- **Frontend:** React.js, Three.js, GSAP, 3D/Scroll Animation, CSS Custom Properties (Theming), React.lazy (Code-Splitting), Error Boundaries
- **Backend:** Node.js, Express.js, REST APIs, JWT Authentication, bcrypt, Mongoose, MongoDB
- **Cloud/DevOps:** AWS (EC2, Lambda), Docker, Nginx, PM2, SSL, Render, Vercel
- **Integrations:** Razorpay, Cloudinary, Nodemailer, Google Calendar API, Web Speech Recognition API
- **Tools:** Git/GitHub, VS Code
- **Soft Skills:** Communication, Time Management, Problem Solving, Creative Thinking

EXPERIENCE

Freelance Frontend/UI & Shopify Developer | Freelance
2026 – Present | Remote

- Partner with a fellow developer to design, build, and enhance user interfaces for independent client projects, including digital marketing and coupon/deals platforms.
- Redesign existing UIs with modern, conversion-focused layouts, translating client requirements into responsive, production-ready React.js components.
- Designed and customized multiple Shopify storefronts across different niches (makeup, farming, and more) — downloading a base theme, redesigning it end-to-end via the Shopify platform (account setup, theme customization, store configuration), and using Shopify AI Chat to build additional custom animated sections for a polished, professional look.
- Set up Razorpay payment integration on Shopify stores and researched/structured client content into well-organized, professional sections — header, navbar, footer, FAQ, image-comparison sliders, image-with-text layouts, input/contact forms, and animated video sections.

Full-Stack Developer Intern | Healee – R&D (Remote)
Apr 2024 – Dec 2024

- Designed UI/UX and developed scalable full-stack applications using React.js, Node.js, and MongoDB.
- Partnered with AI engineers to integrate Google Calendar into AI-driven scheduling pilots, delivering high-performance workflow solutions.
- Built a secure, role-based Healthcare Schedule Optimization platform with isolated login portals for Students, Parents, Providers, Admins, and Coordinators — each role restricted to its own UI with no cross-role access.
- Modeled linked Student, Parent, and Provider profiles (20+ structured data fields per relation) so parents could view and manage their child's data directly from their own dashboard, enabling accurate, informed appointment booking.
- Integrated Nodemailer to automatically email Parents a confirmation whenever an appointment was successfully scheduled.
- Embedded Google Calendar via iframe for real-time, shared visibility of appointments across Students, Providers, and Parents.
- Gave Admins full access to view and manage all appointment details, while Coordinators could define profile-based intake questions (preferred appointment time, reason for visit, preferred language, etc.) tailored to each student.

Software Engineer | Artanes – R&D (Remote)
Jan 2024 – Mar 2024

- Built a secure, role-based health management system (Student, Provider, Parent, Admin, and Coordinator portals) powered by REST APIs for efficient data handling.
- Integrated Google Calendar for streamlined appointment scheduling and enabled Admins/Coordinators to manage student data and profile-based questions.
- Developed the Care Plan Health login/signup UI with JWT-based authentication, persisting auth state via HTTP cookies and using Mongoose (MongoDB ODM) for schema-validated, reliable data storage.
- Built a role-based Login/Signup system with distinct UI and permissions for Admin and User, using REST APIs to store and manage data in the backend.
- Integrated a Voice Recorder (via the Web Speech Recognition API) and a Stopwatch to extend platform functionality.
- Deployed the project on AWS EC2 with Nginx and PM2 for scalable, reliable performance.

PROJECTS

Task Management App | GitHub
React.js | Node.js | Express.js | MongoDB | JWT | bcrypt

- Built a full-stack task and project management application with JWT-based authentication; user passwords are hashed with bcrypt so plaintext credentials are never stored or exposed.
- Implemented a secure change-password flow that verifies the current password via bcrypt comparison before hashing and persisting the new one.
- Designed project-specific task boards with independent schemas, enabling users to create, update, and track tasks (Todo / In Progress / Done) by priority, category, and due date, alongside personal profile management and account deletion.
- Built a global theming system using CSS custom properties (CSS variables) defined in a single central stylesheet and applied site-wide, improving maintainability and allowing the entire color theme to be updated from one file.
- Implemented Error Boundaries around key components with custom fallback error pages, isolating failures so a crash in one component doesn't break the rest of the site.
- Applied React.lazy code-splitting to defer rendering of components until they're needed, reducing initial load and improving overall responsiveness.
- Built REST APIs for full CRUD (create, read, update, delete) task management; deployed via GitHub and Vercel with fully responsive CSS across mobile, tablet, and desktop.

Mercedes-Benz 3D – Interactive Car Showcase | GitHub
React.js | Three.js | GSAP | Scroll-based Interactions

- Independently conceptualized and built an interactive, scroll-driven 3D website using Three.js and GSAP, featuring a cinematic hero video and a live speedometer that switches drive modes (Ice, Sand, Off-road, Comfort) in sync with dynamic RGB lighting and motion as the user scrolls.
- Implemented real-time car color customization, dynamically updating the 3D model's material color on click (e.g., true red or blue) for an interactive product-configurator experience.
- Designed scroll-triggered color transitions, a detailed product showcase with customer imagery, and an animated footer, delivering a polished, professional 3D user experience.
- Built fully responsive CSS for a seamless experience across mobile and desktop; deployed via GitHub and Vercel.

Flower Bouquet – E-Commerce for Handmade Ribbon Bouquets | GitHub
React.js | Node.js | Express.js | MongoDB | Cloudinary

- Designed and built a full-stack e-commerce platform with completely separate Admin and User login/signup flows and role-based dashboards, so neither role could access the other's interface.
- Built an Admin dashboard to manage products (add/update/delete) and monitor all registered users and customer messages/inquiries submitted through the contact form, all backed by REST APIs.
- Integrated Cloudinary for centralized product image storage and fast, reliable delivery.
- Crafted user-facing About, Contact, Products, and Home routes with category-based browsing and cart functionality; the About page highlights team members, roles, and company milestones via a form-driven, dynamic UI.
- Embedded Google Maps via iframe on the Contact page so customers could easily locate the workshop.
- Applied a globally reusable CSS system using CSS custom properties (variables) for consistent, responsive styling across devices; deployed on Vercel.

E-Commerce Website
React.js | Node.js | Express.js | MongoDB

- Built a responsive full-stack e-commerce platform with JWT authentication and role-based Admin/User access.
- Integrated Razorpay (test mode) for multi-mode payments (UPI, cards, QR, COD) and Nodemailer for automated emails; used Cloudinary for media management and deployed on Render with a real-time Admin dashboard for orders and inventory.
